

How To Ethically Steal Wall Street's Best Kept Secret: Using Algos for Massive Profits

For years, Algo Trading has been one of Wall Street's best kept secrets. It's allowed big institutional investors to make billions in trading profits. But recently, this same type of trading has become available to retail traders.

Algo Traders use special computer programs that make split-second trading decisions for them. The rules are set beforehand and the algorithm simply follows the rules to know when the best time to buy and sell is. It gives traders an immense edge since it removes all emotion from trading. **Download this free ebook to learn more and find out how you can harness the power of Algo Trading too.**

Promo Email 1 - From math teacher to 36th richest in the world

Alt Subject: How Algo Trading made this man a multi-billionaire

From: ATE Team

Hi ~Contact.FirstName~,

Before Jim Simons got into trading he was making a modest living as a college math professor.

Today he's worth \$23.5 billion and in the top 40 richest people in the world.

But what's even more remarkable than that is *how* he did it...

You see, Simons approached the market in a completely different way than everyone else.

He didn't rely on intuition, instinct or trading experience...

Instead he used cutting edge technology called [Algorithmic Trading or "Algo Trading"](#) as insiders call it.

Algo Trading is where you program a computer algorithm to automatically place trades for you based on predefined rules.

This allows you to remove all human emotion from trading. And so it's no surprise why it gives traders such an edge.

Algo Trading is one of Wall Street's best kept secrets.

But up until recently it hasn't been accessible to retail "Main Street" traders.

However, that's all changed thanks to new technological innovations which has made Algo Trading accessible for everyday traders.

We're going to do a special webinar training on Algo Trading.

[CLICK HERE to reserve your spot now.](#)

In the webinar you'll discover:

- **The current state of Algo Trading and why 80% of all trades placed today are placed by computers (and what implications this has for traders going forward).**
- How Jim Simons disrupted Wall Street by essentially “cracking the code” of the market (and how this resulted in an average annual gain of 66% since 1988).
- **Why it’s critical to be aware of the popular myths floating around about how Algo Trading works. If you’re not aware of these, it’s easy to lose a lot of money.**
- The pros and cons of buying a done-for-you Algo Trading system vs building your own (This will help you make a better decision about how to get started with Algo Trading).
- **The exciting new opportunity Algo Trading presents to retail traders. And why if you get into Algo Trading now you’ll be 5-10 years ahead of the curve.**

You don’t want to miss this one!

Promo Email 2 - May 11, 1997 “Man v Computer”

Alt Subject: Man vs Computer: The Billion-Dollar Chess Match

From: ATE Team

Hi ~Contact.FirstName~,

On May 11, 1997 in New York City, world chess champion, Garry Kasparov, sat down to play Deep Blue, IBM’s supercomputer.

It would go down as one of the most famous chess games in history as the world’s best human player lost to a computer after just 19 moves.

Meanwhile, across town there was another “man vs computer” game being played -- this one on Wall Street.

It was Jim Simons’ trading supercomputer vs the best hedge fund managers in the world.

And the computer was winning this game too as evidenced by the fact Simons was at that time, the “world’s highest paid fund manager.”

But the crazy part is that he never made any trades himself...

Instead he programmed his computer to abide by certain trading rules -- rules that would never be compromised by human emotions -- and then he let the computer loose on Wall Street and it ate everybody’s lunch!

Computer trading aka “Algo Trading” revolutionized Wall Street. After that hedge funds raced to develop their own trading algorithms, which generated billions for them.

Meanwhile, retail traders were left in the dark about this. For nearly 20 years it remained a closely guarded Wall Street secret...

However, this has recently all changed as Algo Trading has burst on the retail trading scene.

Now, thanks to new technological innovations, everyday “Main Street” traders can now get in on Algo Trading.

We’re going to do a special webinar training all about this.

How To Ethically Steal Wall Street's Best Kept Secret To Generate Massive Profits

Algo Trading for Beginners

Why Algo Trading

Since 1988 Jim Simons has generated average annual returns of 66% and over \$100 billion in trading profits. He's outperformed Warren Buffet, Peter Lynch and Ray Dalio. But what's even more impressive than his results is the fact that he doesn't actually place his own trades.

Instead he uses something called algorithmic trading -- or 'Algo Trading,' as insiders call it. It's a strategy built on the idea that the best way to beat the market is to remove all emotion by using algorithms to trade for you.

Algo Traders use special computer programs that make split-second trading decisions for them. The rules are set beforehand and the
